2	Comments by source:
3	<p>CCC - Coquihalla Cattle Co. (L. Cooke); CIB - Coldwater Indian Band (H. Aljam); CRSFS - Coldwater River Storage Feasibility Study (Dec 2002); CURNOW - Sandy &/or Les - local residents); DLR - Douglas Lake Ranch (S. Jacobs, S. Murray); DU - Ducks Unlimited (Library information); KITSCH - Dick (local resident); KJR Ranch - R. Thomsen; LNIB - Lower Nicola Indian Band (H. Joe); MOF - Ministry of Forests Lake Classification 1995-1998; SCFH - Spius Creek Fish Hatchery - D. Turvey; SHUTER - Francis (local resident); STRAND - Doug (local resident);</p>
4	SHUTER - All the major lakes have some type of dam structure. Nicola Ranch irrigation crews open water as needed and to keep flow of Clapperton Creek viable for fish production.

10	<p>CCC - Coquihalla Cattle Co. (L. Cooke); CIB - Coldwater Indian Band (H. Aljam); CRSFS - Coldwater River Storage Feasibility Study (Dec 2002); CURNOW - Sandy &/or Les - local residents); DLR - Douglas Lake Ranch (S. Jacobs, S. Murray); DU - Ducks Unlimited (Library information); KITSCH - Dick (local resident); KJR Ranch - R. Thomsen; MOF - Ministry of Forests Lake Classification 1995-1998; SCFH - Spius Creek Fish Hatchery - D. Turvey; STRAND - Doug (local resident);</p>
11	<p>CRSFS - One of the eight recommended sites with potential to provide increased storage and increased streamflows in the low flow period of the year. Medium priority for further storage assessment based on field information. Could likely provide rock support to a small concrete dam without excessive excavation. Concrete would have to be hauled in from Merritt. Based on 5 m dam. 5 m storage possible with dam at point where channel passes through narrow gorge. Site is within Lot 1323.</p>
12	<p>CIB - Historically had a natural earth dam on south end of lake which flowed into a natural waterway which flowed down to Coldwater IR. Fields at Coldwater IR can only be irrigated during spring freshet. Beaver dam assisted summer flow, but don't have natural summer flow towards the Coldwater IR. CIB wanted to raise water level of Gwen Lake to drain water towards IR #1. Historically elders did that. There is a high loss of water to seepage. Gravity line from creek out of Edna Lake feeds Gwen Lake to keep it topped up. 8 water licences currently held by CIB are on the Coldwater River and Kwinshatin Creek (5 ditches). All for irrigation purposes.</p> <p>CRSFS - One of the eight recommended sites with potential to provide increased storage and increased streamflows in the low flow period of the year. Medium priority for further storage assessment, possibly suitable for low earth dam construction. Use earthfill embankment at south end of lake. Some dyking will be necessary at the north end to prevent flooding of Gwen Lake IR #3. Lots 3764, 3239 and 3241 are located along the shoreline of the lake.</p> <p>MOF - Lake # 2121.</p>
13	<p>CRSFS - One of the eight recommended sites with potential to provide increased storage and increased streamflows in the low flow period of the year. Medium priority for further storage assessment, possibly suitable for low earth dam construction. Based on 1 m dam. Site is located within Lots 646A and 647. Use earthfill embankment at site of damaged existing dam.</p> <p>MOF - Lake # 2173.</p>

E	
14	<p>CIB - Water licence 61158 (1985) in conjunction with DU dam.</p> <p>CRSFS - Existing dam at this location is being used with small reservoir and electric pump station, apparently used for watering cattle and local farm irrigation. Midday Creek and reservoir were both dry at time of visit.</p>
15	<p>CURNOW - Should be revisited as potential storage. There appears to be renewed water in this area.</p>
16	<p>CRSFS - One of the eight recommended sites with potential to provide increased stroage and increased stremflows in the low flow period of the year. Medium priority for further storage assessment, possibly suitable for low earth dam construction. based on field information.</p>
