Better Drought Info On BC Government website. How do we determine drought levels?

Will Agriculture and Food Security ever be incorporated into a community/city/regional plan?

How can we provide enough water for economic growth (including new commercial developments) ecological values, residential and agricultural use? What would that cost and look like?

Can the City and TNRD do more education on water-wise and water-holding plants?

Could water from City water treatment plant be used for irrigating city parks?

If BC has no intent to provide any new water irrigation licensing, why does BC continue to accept applications and application fees?

If irrigation of agg crops doesn't cause water shortage due to water going back into the ground, why do some "need" a water license if technically we are just borrowing the water to irrigate?

I have been using a well since 1982. I was unaware it was not licensed so have applied for a license, paid for, notified accepted. How do I get the license with my property address on it? Email update to applicant? (This question was asked 3 times)

We need rain barrels.

Water meters are not fair to young families - they cannot afford higher costs.

Is there a perceived or true water storage? How do we measure shortages? Are conservation measures required and effective?

When buyers move into the area, should the realtor be obligated to disclose if the acreage does NOT have a water license?

Considering the lack of water, why do water license holders continue to irrigate during the heat of the day when the water is evaporating?

Discuss the Water Sustainability Act as it applies to logging near any domestic water users.
